

Author biography

Anastas Stoyanovsky is a mathematician and engineer. Trained in pure mathematics (MSc, Purdue University), he has spent a decade building natural-language and information-retrieval systems — at IBM Watson and Amazon among others — and holds patents in natural-language processing. As an independent researcher he designed and directed the Chuzhditsa project: a phonological citation register for Cyrillic and the four-family parametric typeface that implements it. He is the author of its companion papers on the orthography and on the human–AI production process behind the artifacts.
